

Kelley Beekeeping

SERVING THE BEEKEEPER SINCE 1924

The Complete Uncapping System

Use the crossbar on top of the tub to set your frame as you scratch the cappings. There is a nail in the center of this bar that is used to help hold the frame steady.

Once you have uncapped the honey, place the frame in the frame rest to drain down into the tub.

As you are uncapping the rest of your frames, the others are draining into the tub. The metal grates in the bottom lets the honey fall through it as it catches the wax cappings.

Next, you simply open the gate to empty your honey into another container for more filtering.

This metal piece sets on the gate to block the large cappings from going through the gate.
